Installation

Windows

You can download the free version or the Standard/Plus version from our official [FastFileLink](#) website. In addition, you can also download the free version from the [Microsoft Store](#).

Linux & Mac

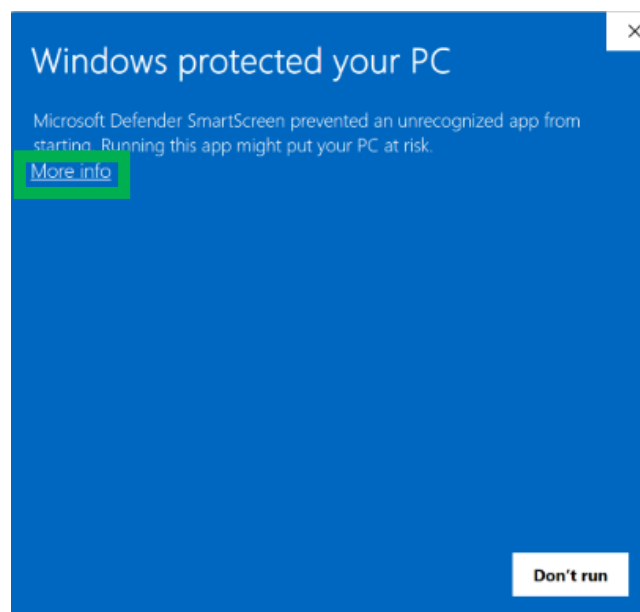

You can download the free version or purchase and download the paid version from our official [FastFileLink](#) website.

First use

Windows

Unknown Publisher Security Warning

When first-to-use after download, you might receive user account control warning from Windows. Please click “More info” to show the detail and click "Run anyway" to trust it and make the application running normally. If you worried about the security of the application, please refer to the [FAQ Q1](#) & [Q2](#). Alternatively, you can directly download it from [Microsoft Store](#) for your peace of mind.

Click “More info” to show the detail

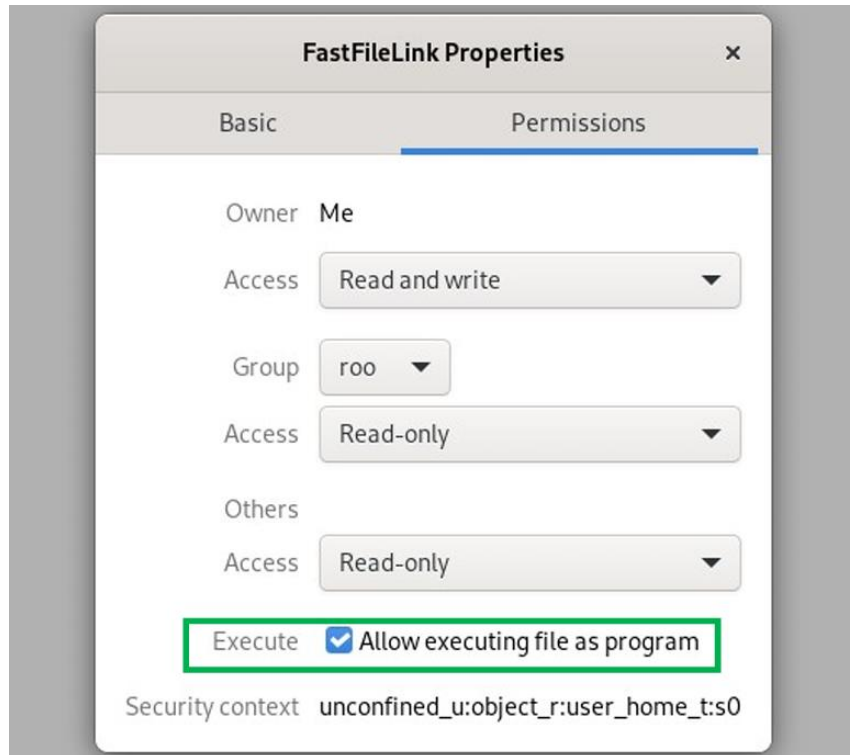

Click "Run anyway" to trust the application

Linux

Allow executing file as program

When first-to-use after download, you might need to right click on **FastFileLink** and click **Properties**. Choose the tab **Permissions** and click on “**Allow executing file as program**” to let **FastFileLink** can be executed by double click.

Mac

Download from the Internet warning

When you open FastFileLink.app for the first time after downloading it from the Internet, macOS may show a dialog.

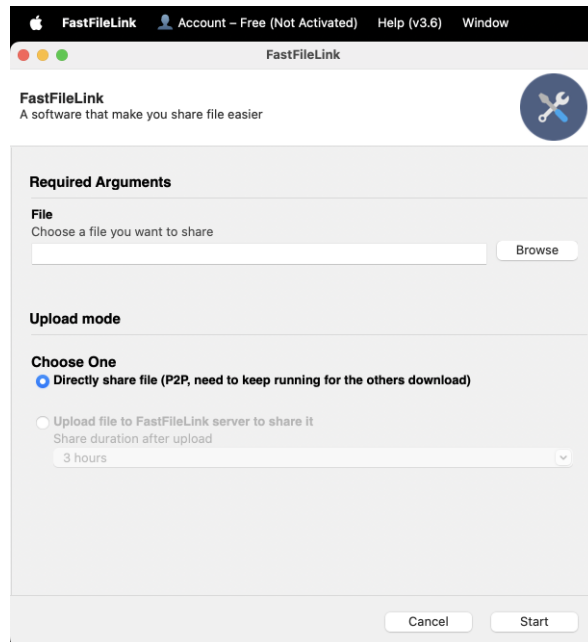

This is a normal macOS security feature called Gatekeeper. It appears whenever you launch an application that was downloaded outside of the Mac App Store for the first time. As long as you downloaded FastFileLink.app from our official website, you can safely click Open to continue.

After the first launch, macOS will remember your choice and you will not see this warning again.

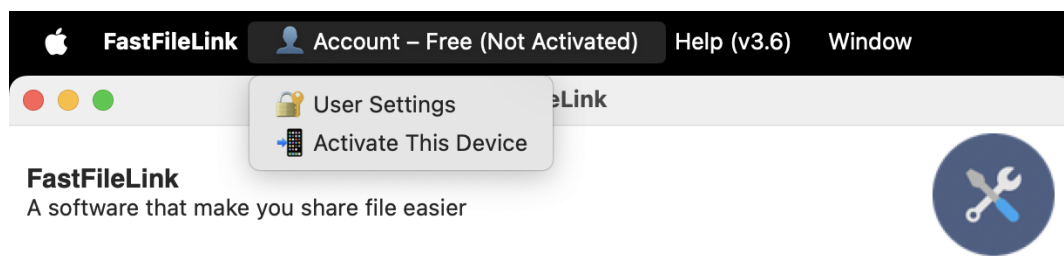

Mac device activation process (For who have purchased our plan)

When you open FastFileLink.app for the first time after downloading it from the Internet, macOS may show a dialog.

Step 1. Open **FastFileLink.app** and you will see a menu bar on the top left side.

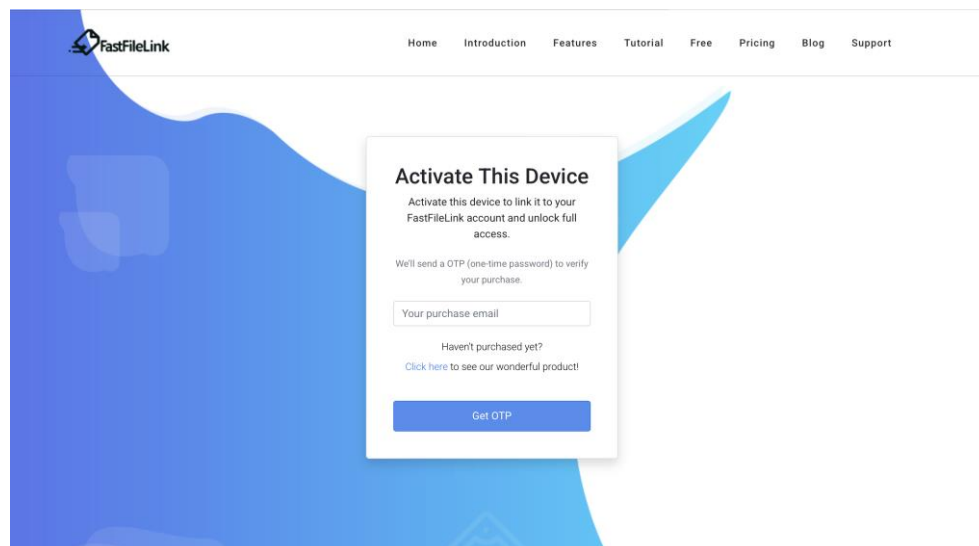

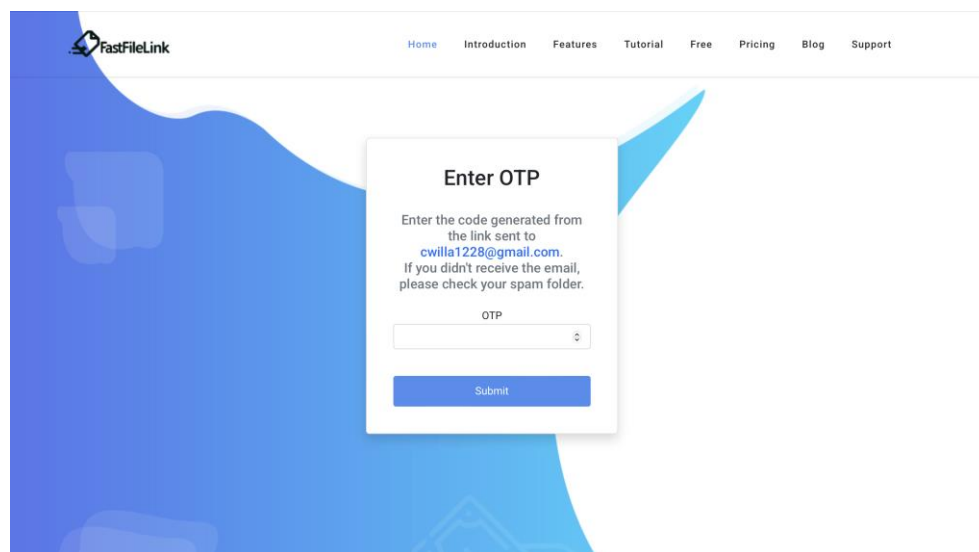

Step 2. Click on the "Account – Free (Not Activated)" and you will see "Activate This Device".

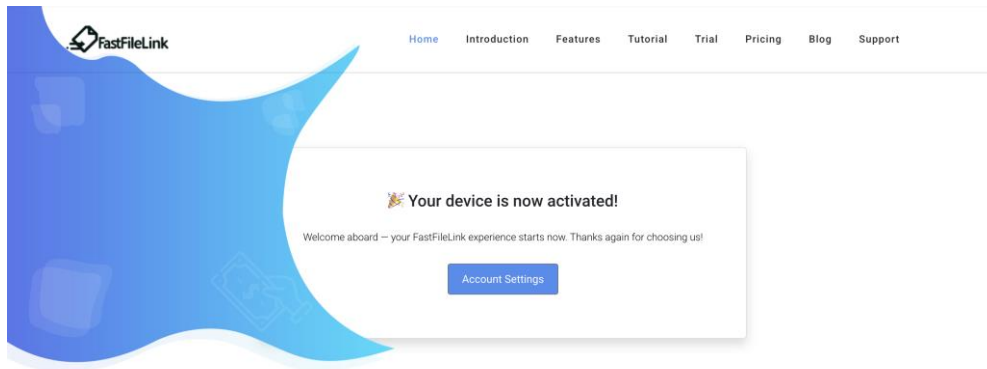

Step 3. Click "Activate This Device" and a window will pop up informing you that we are going to complete the activation process in your browser, and the browser will also open automatically.

Step 4. Follow the instructions shown in your browser to finish the activation process.

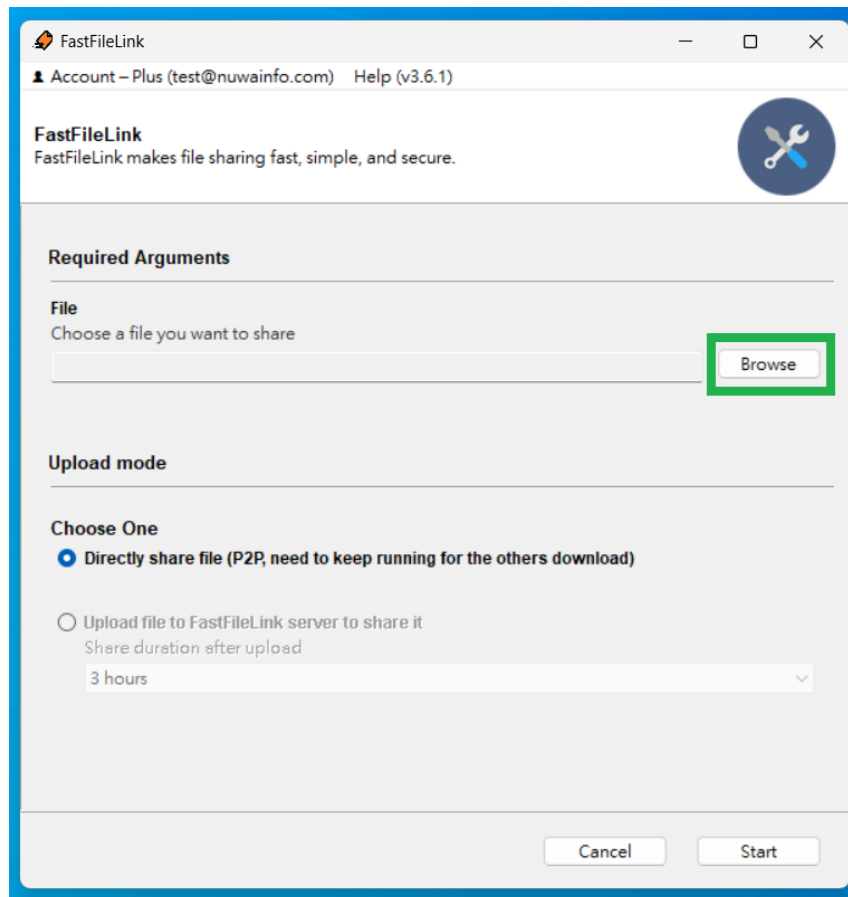

If successful, you will see the **"Your device is now activated"** page. You can then continue to use the app as a STANDARD/PLUS user.

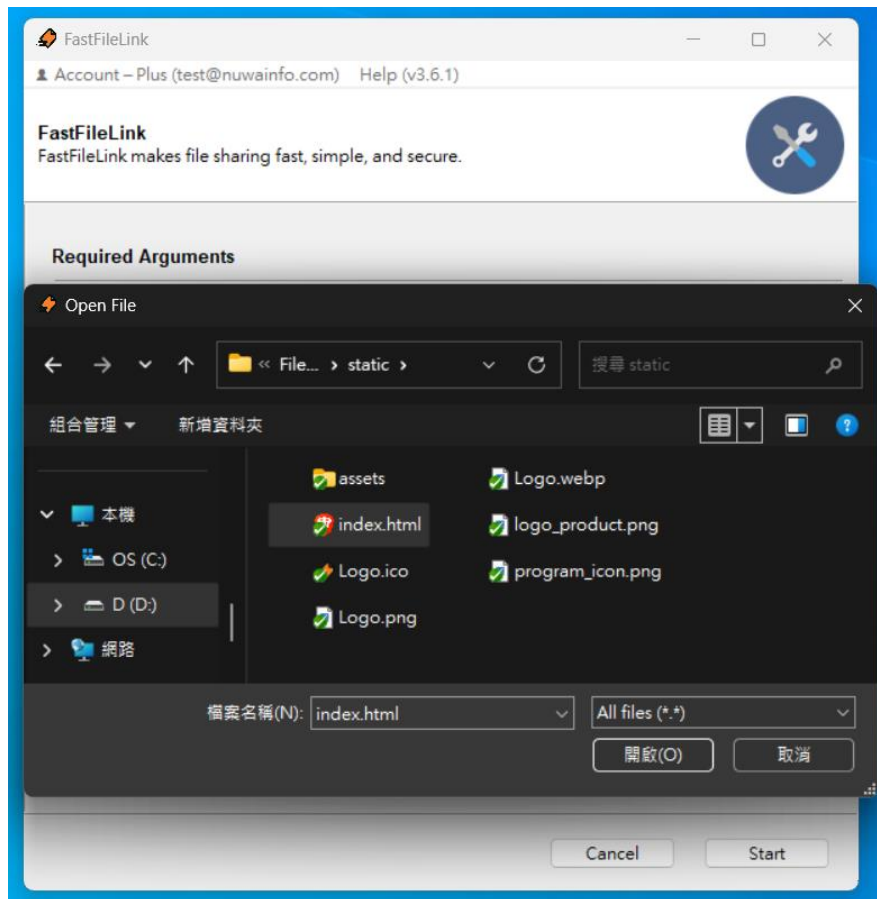

Tutorial

Windows

- 1 Click “browse” to select the file which you want to share.

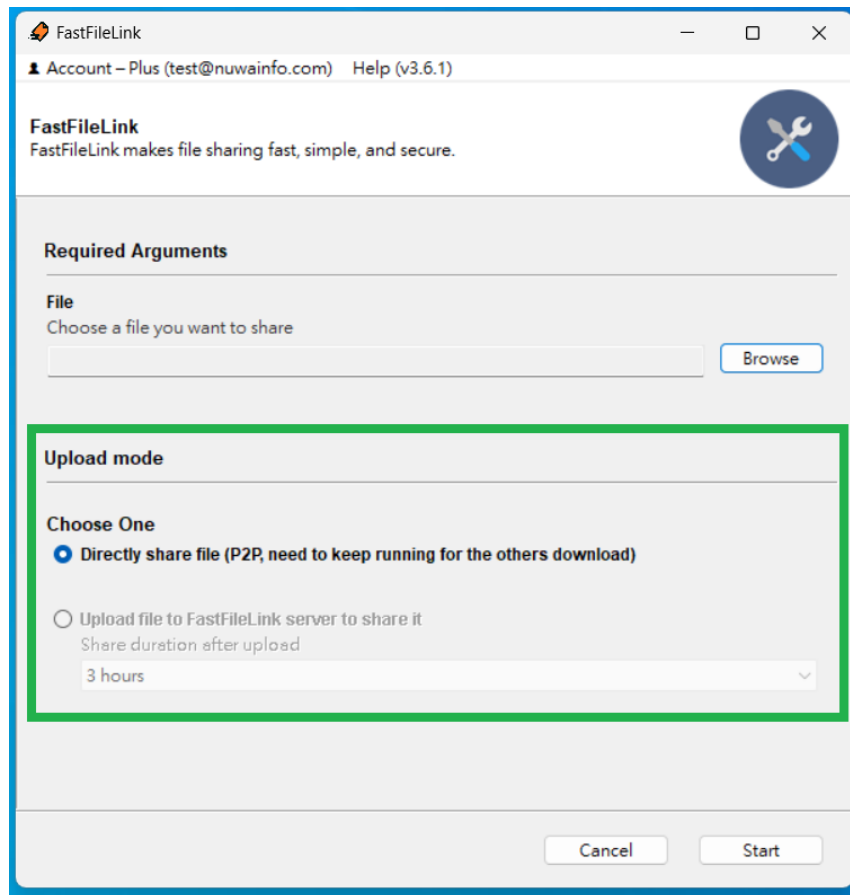

Click “browse” in the right

Select the file which you want to share

2 Choose mode to share your file.

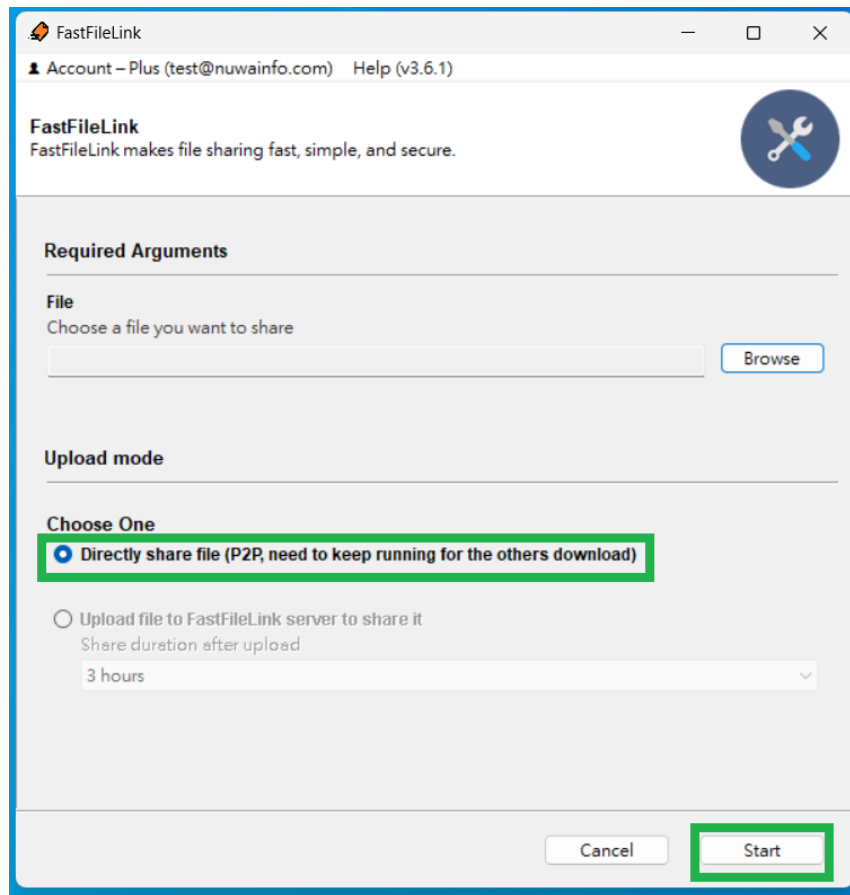

Here are 2 options to share file. One is to directly share ([FAQ Q11](#)) the file to others from your computer, but need to keep the application running until the others download file success. Another is to upload the file to FastFileLink server and let the others download file in limited reservation time.

Choose upload mode

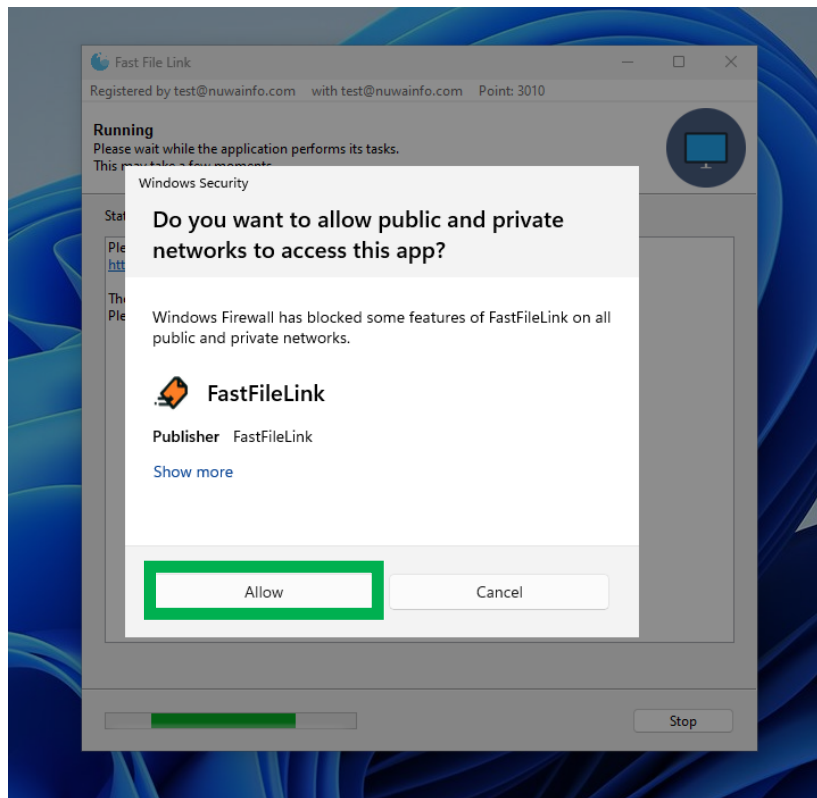

2.1 Directly share file (P2P)

2.1.1 Select “Directly share file (P2P) (Need to keep running for the others download)”, and click “Start” in bottom right.

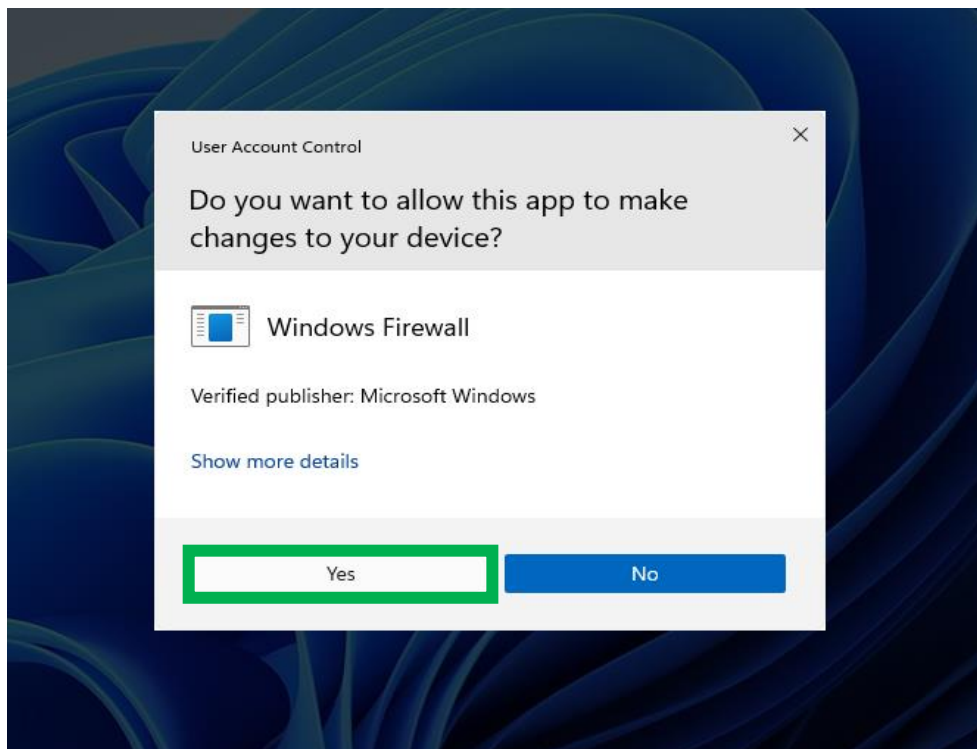

Select “Directly share file (P2P) (Need to keep running for the others download)”, and click “Start” in bottom right

2.1.2 Allow application pass firewall (first-to-use)

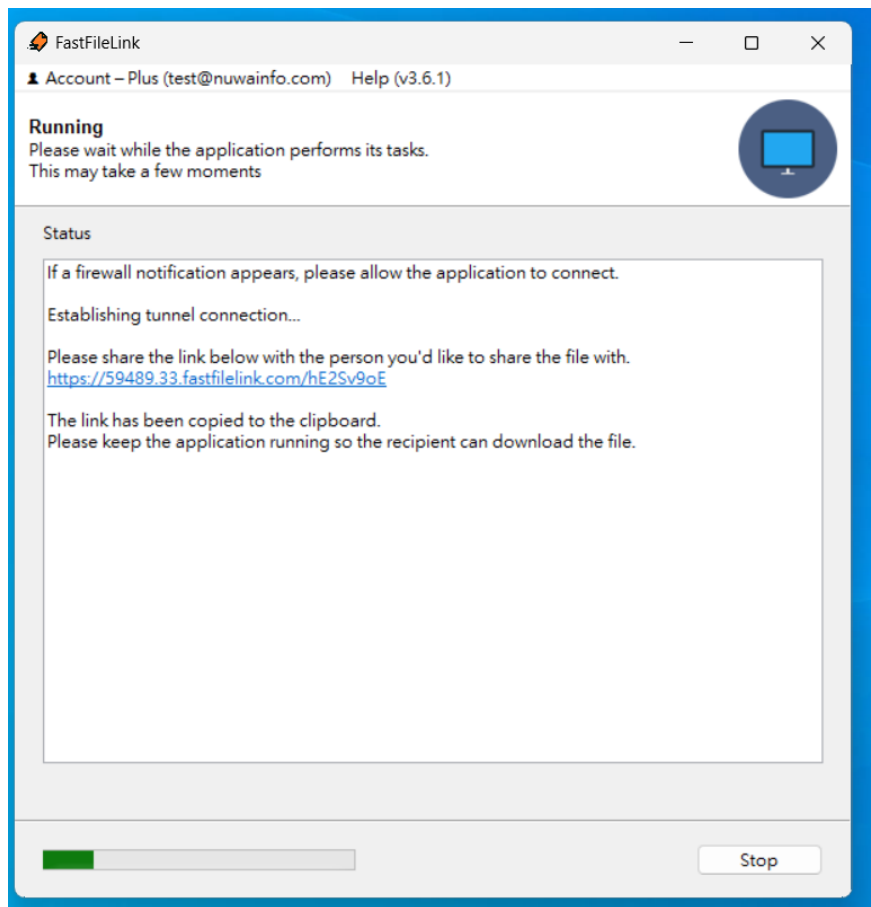

Click “Allow” to let application pass firewall

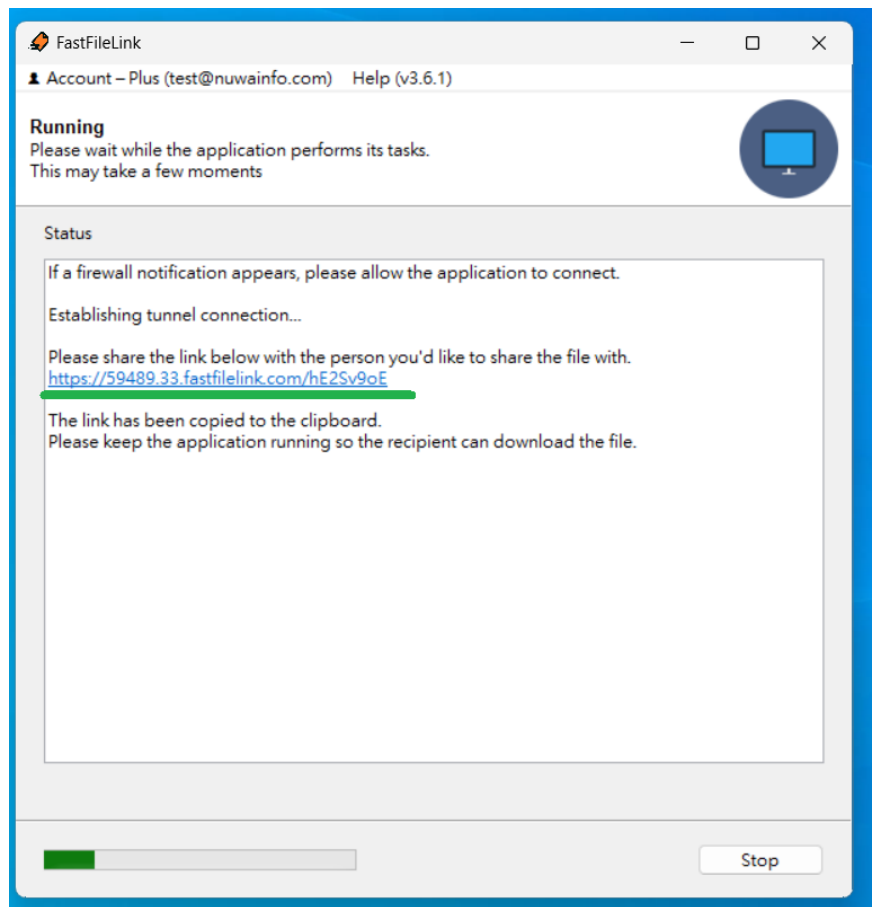

Click “Yes” to let firewall change its rule

2.1.3 Wait until share link shown

Wait until above text shown

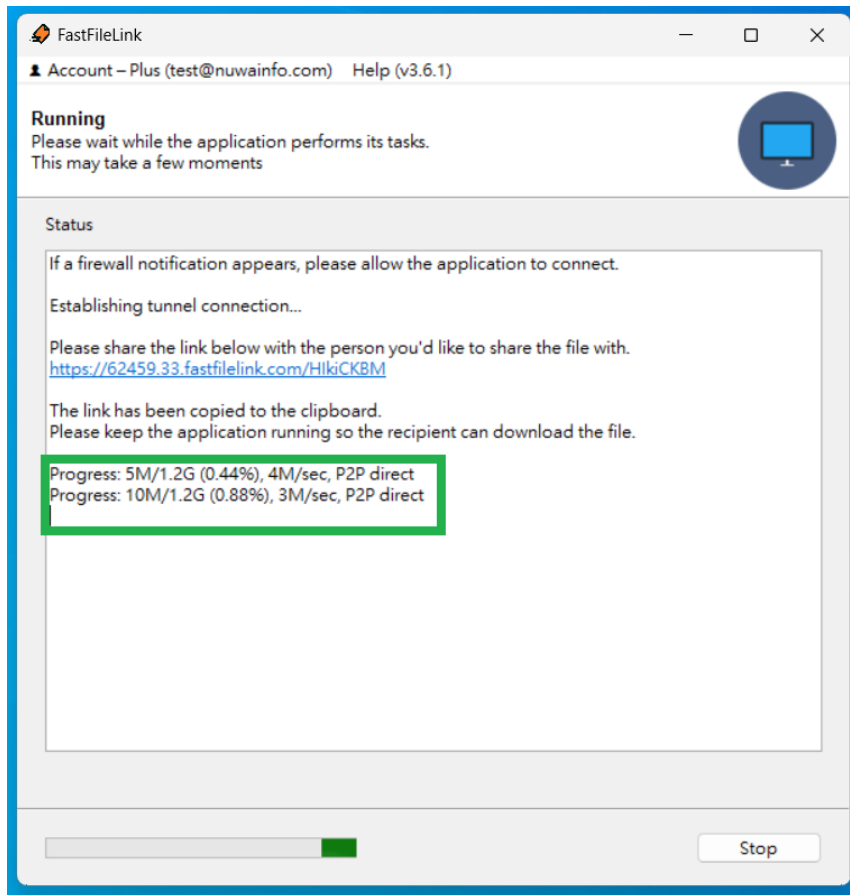

2.1.4 Copy share link to the others

Copy share link to share file to the others

(To make sharing easier, the app auto-copies the link to your clipboard.)

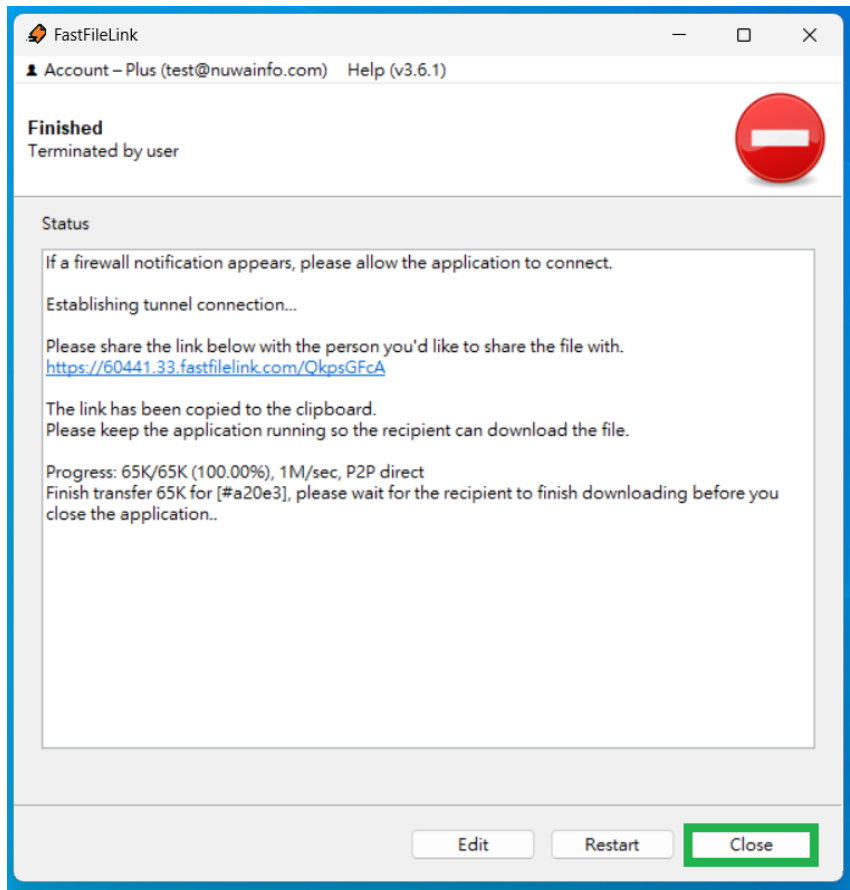

2.1.5 Wait until the others download success, and click “Stop” in bottom right to terminate sharing

When any user starts to download the file, the progress will be displayed in the app

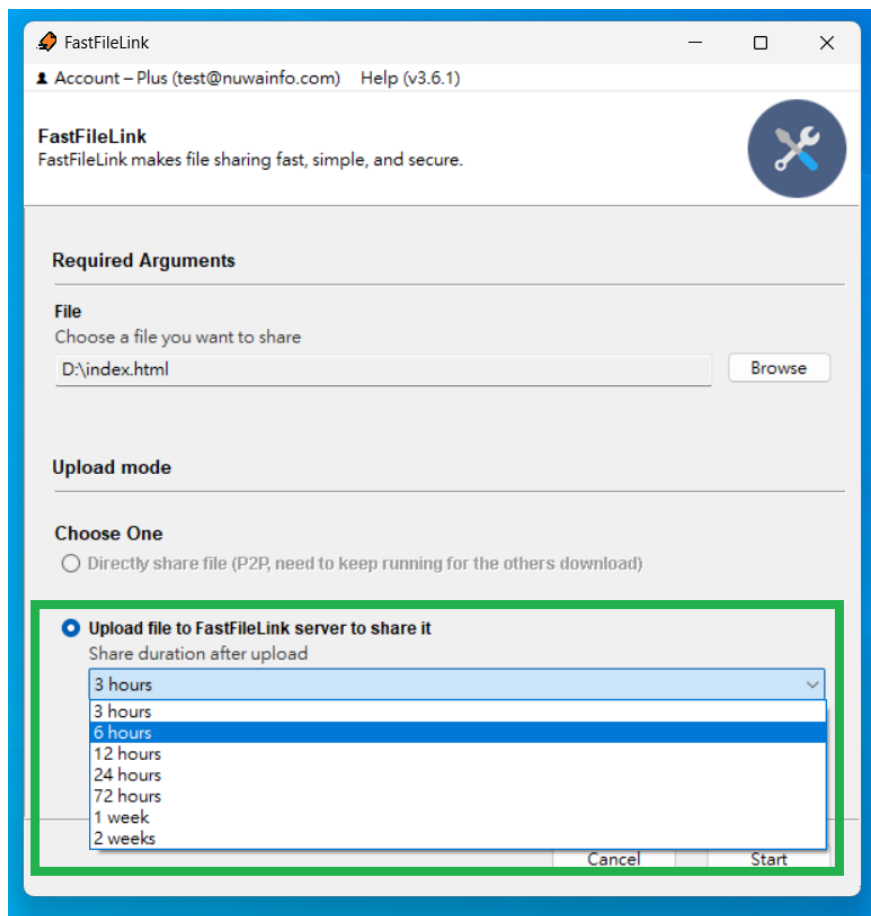

Click "Stop" in bottom right to terminate sharing after the others download successfully

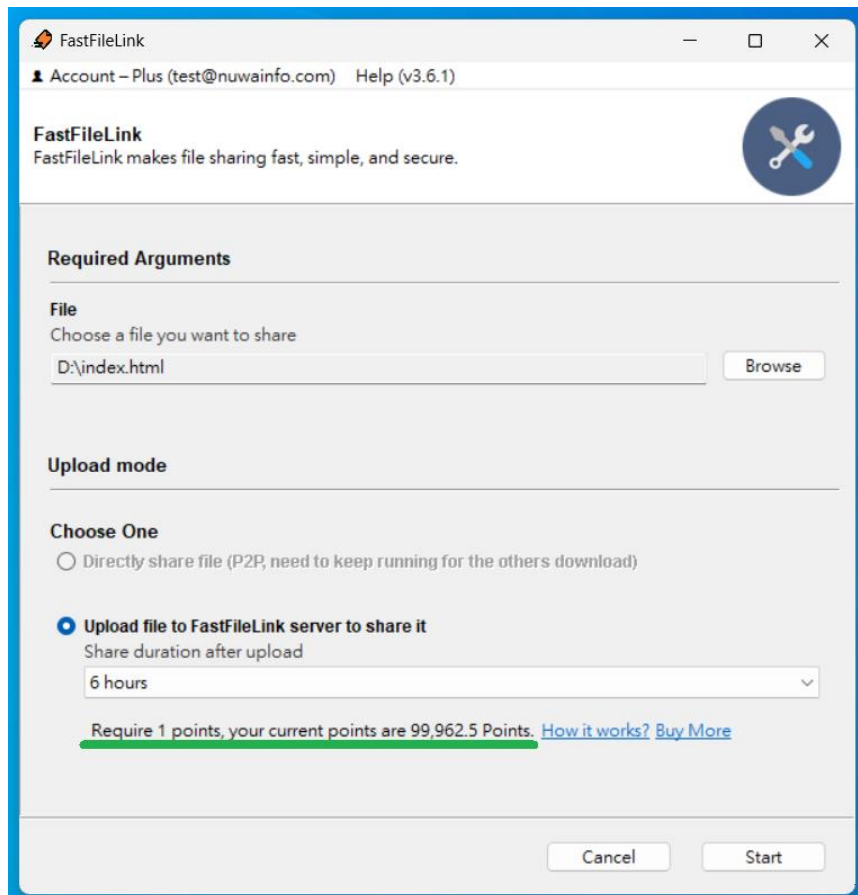

Click "Close" in bottom right to close application

2.2 Upload to server

2.2.1 Select “Upload file to FastFileLink server to share it” and choose one of file retention duration

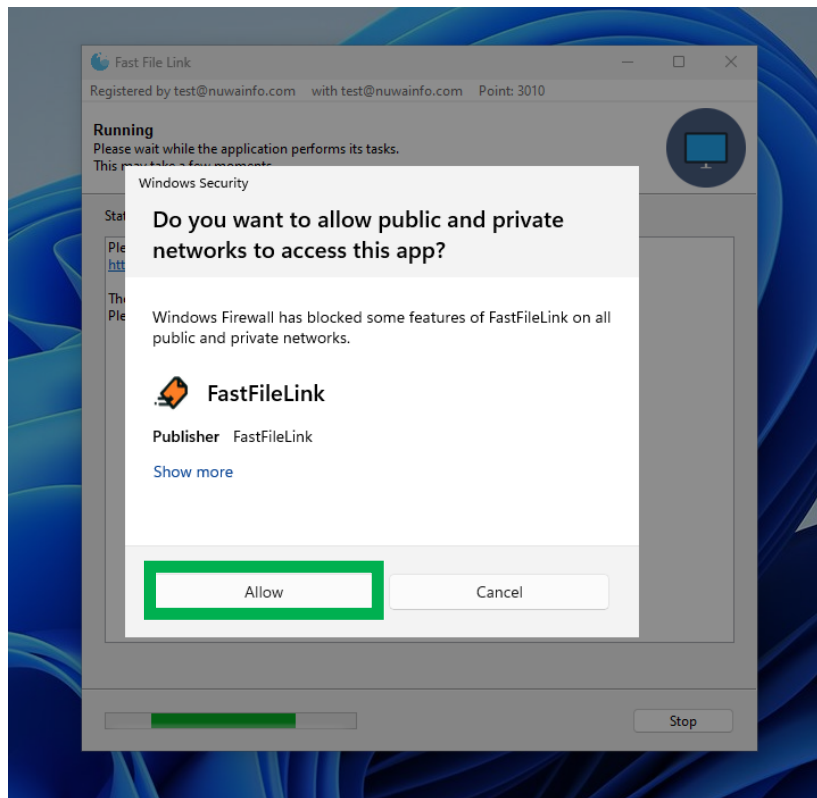

Choose one of file retention duration

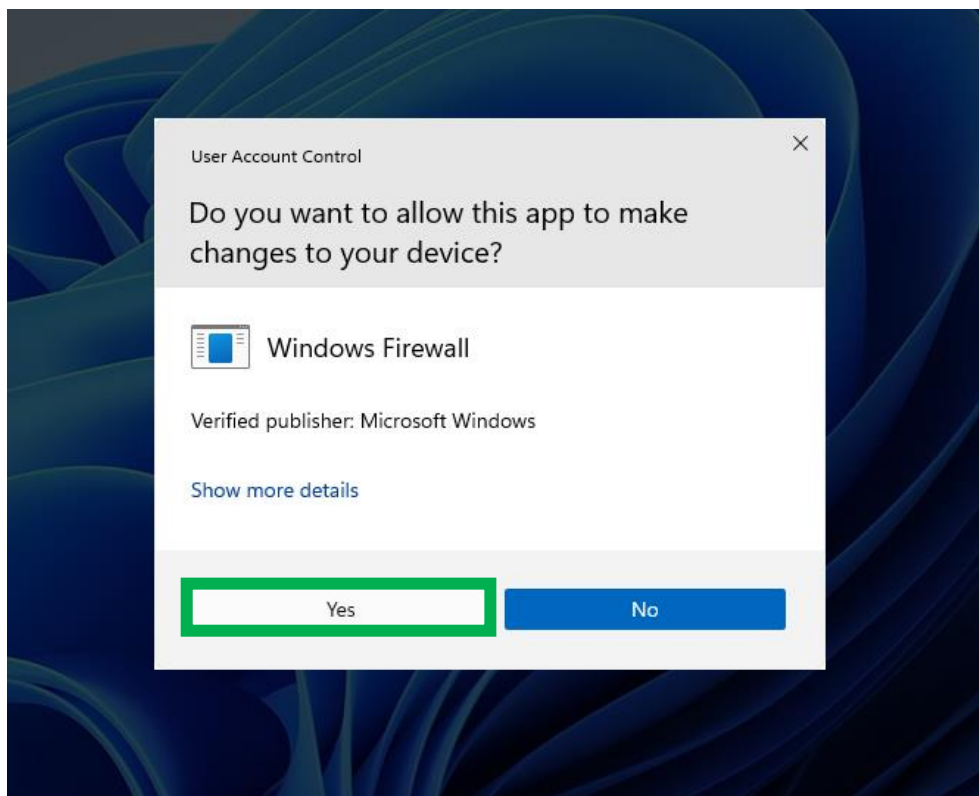

Click “Start” in bottom right to start upload. If your user points are not enough, the server will reject your upload request. ([FAQ Q3](#))

2.2.2 Allow application pass firewall (first-to-use)

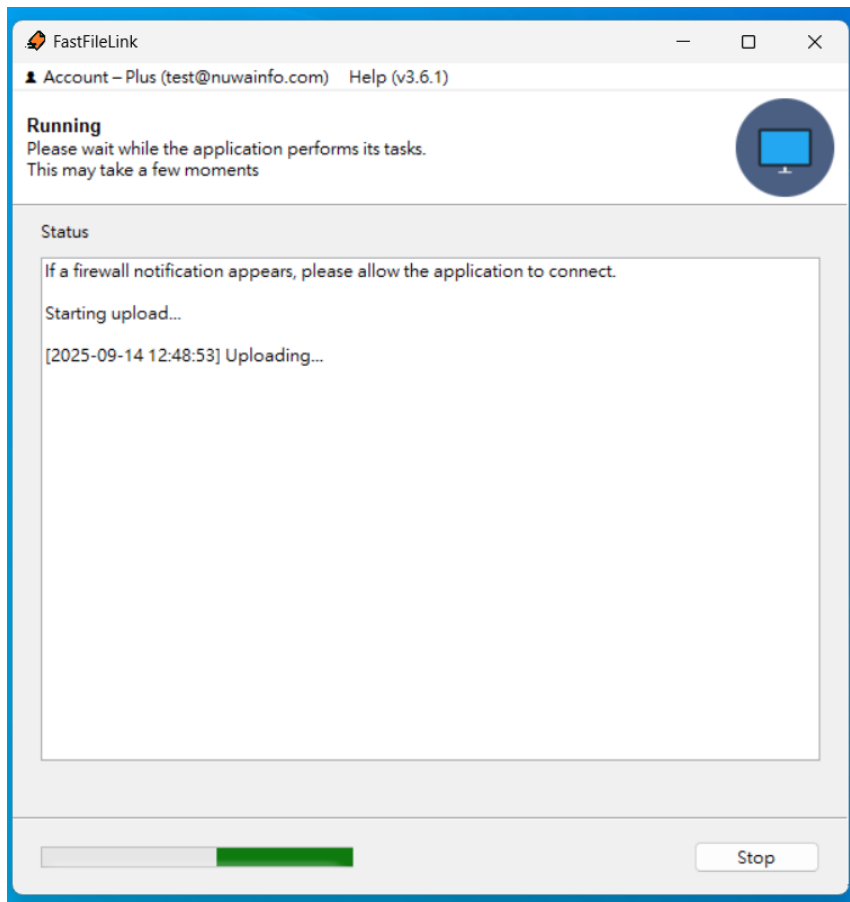

Click “Allow” to let application pass firewall

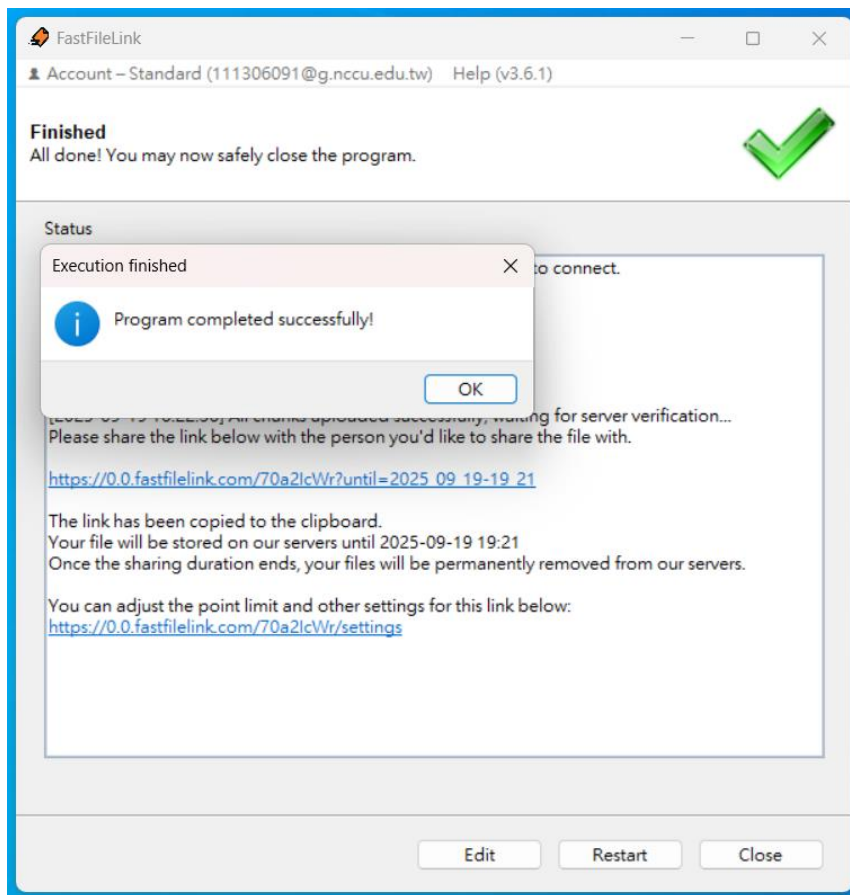

Click “Yes” to let firewall change its rule

2.2.3 Wait until upload successfully

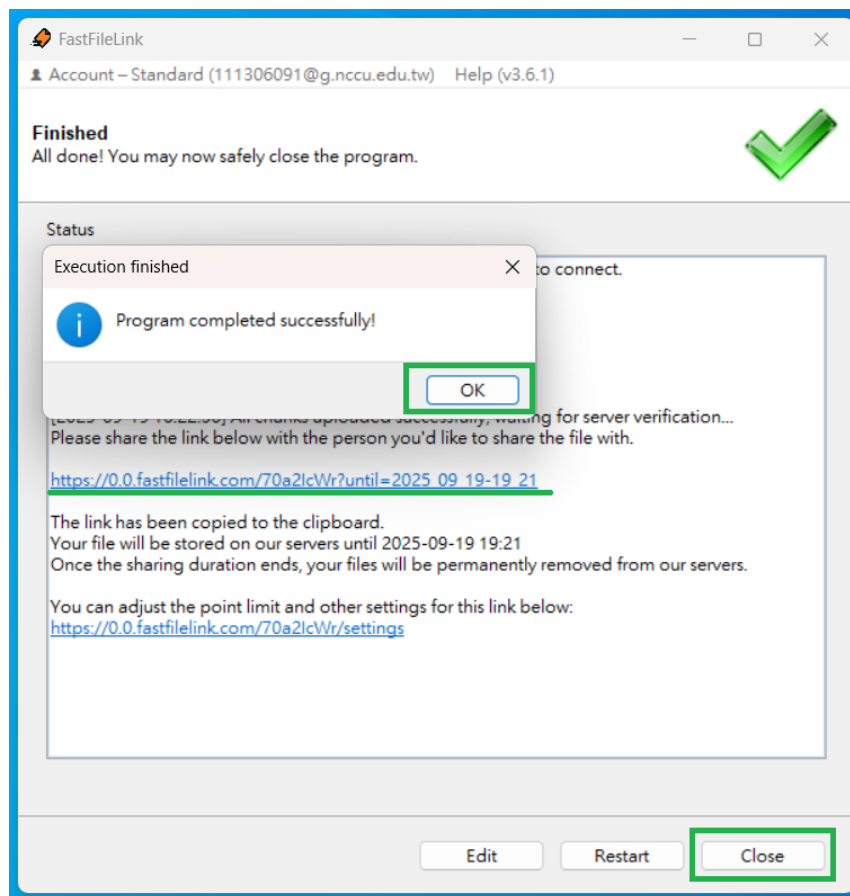

Wait until upload successfully

Upload successfully

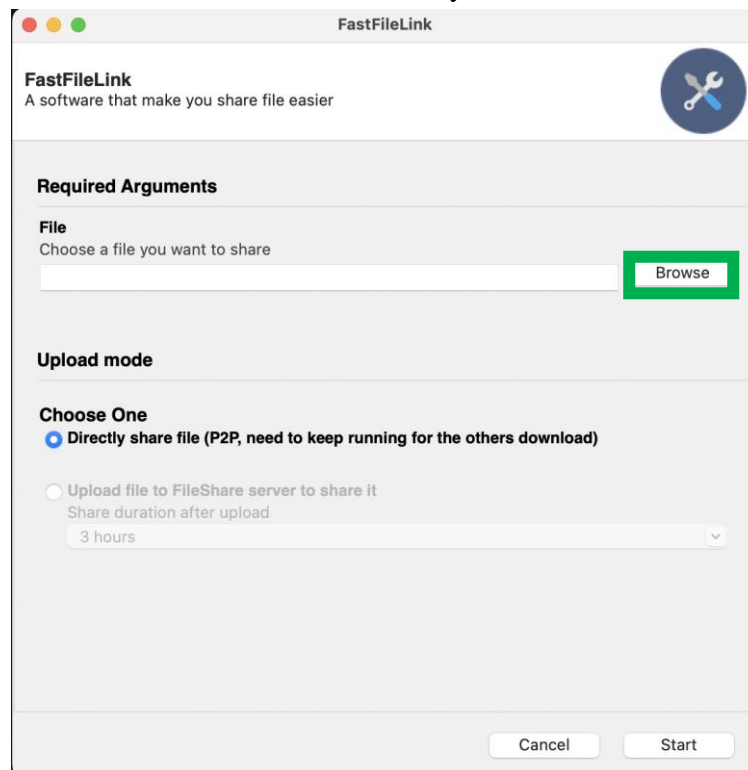

2.2.4 Copy share link to the others

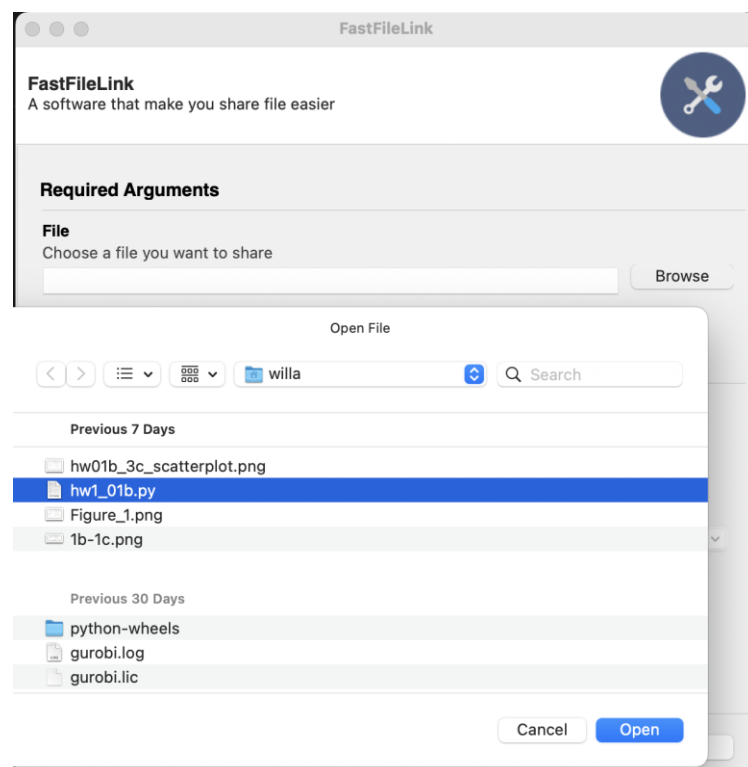

Click "OK" and copy share link to the others to share file. After that you can click "Close" in bottom right to close application.

Linux and Mac

- 1 Click “browse” to select the file which you want to share.

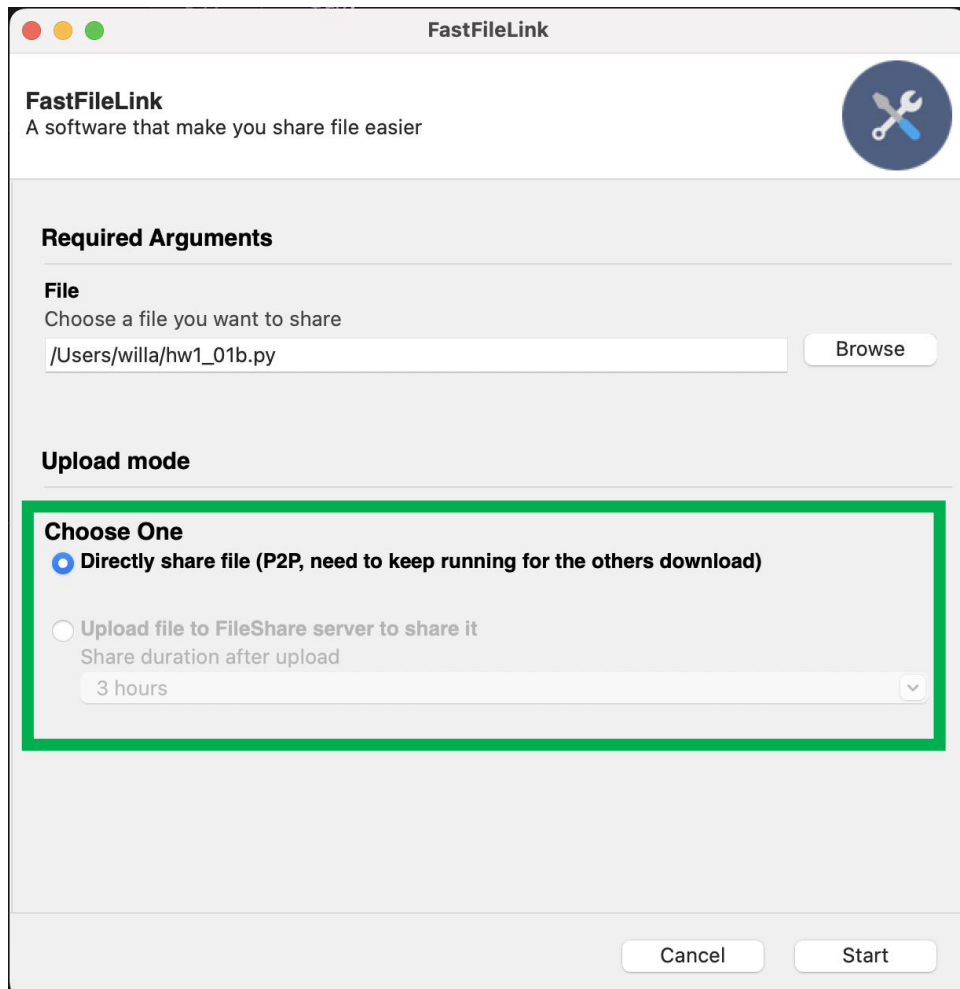

Click “browse” in the right

Select the file which you want to share

2 Choose mode to share your file.

Here are 2 options to share file. One is to directly share ([FAQ Q11](#)) the file to others from your computer, but need to keep the application running until the others download file success. Another is to upload the file to FastFileLink server and let the others download file in limited reservation time.

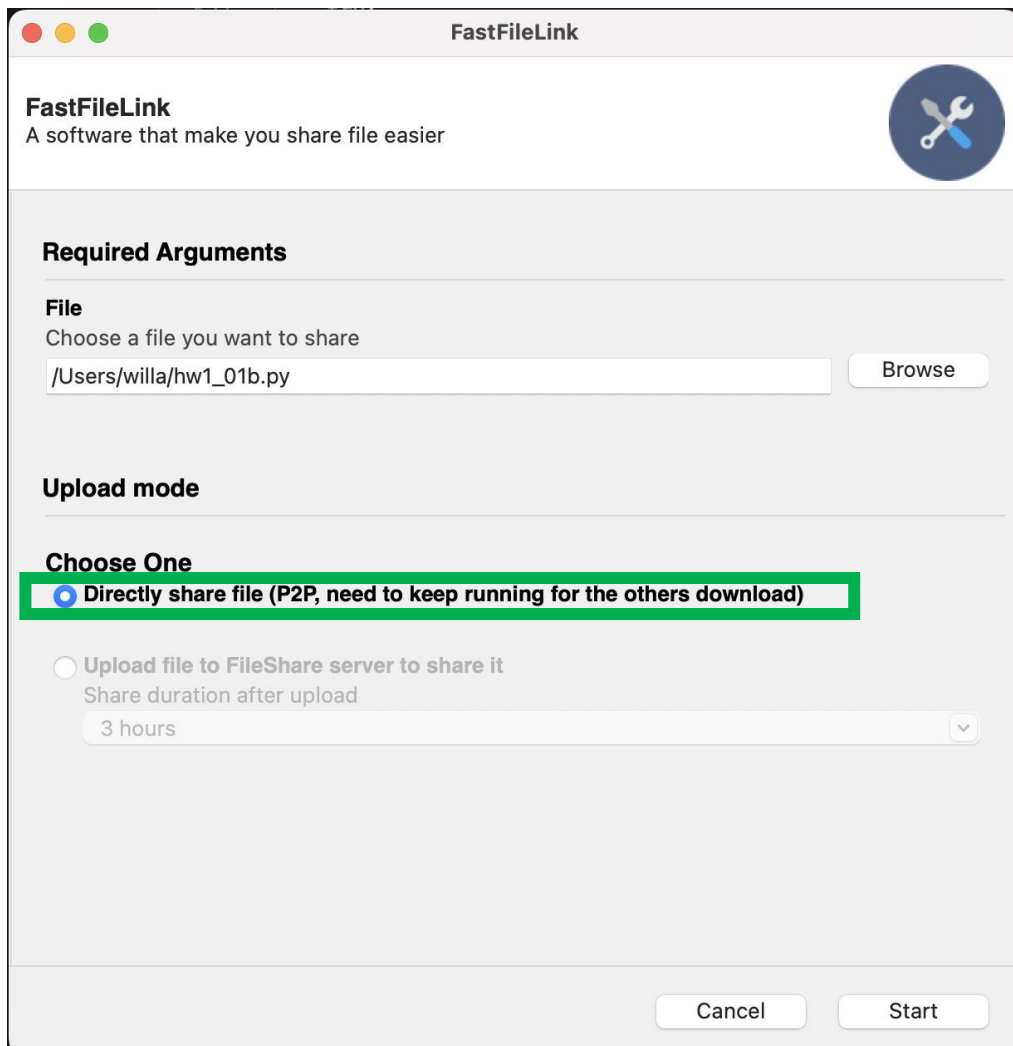

The image shows a macOS-style window titled "FastFileLink". The window has a title bar with red, yellow, and green window control buttons. Below the title bar, the text "FastFileLink" is followed by the tagline "A software that make you share file easier". In the top right corner, there is a circular icon with a wrench and a screwdriver. The main content area is divided into sections. The first section is titled "Required Arguments" and contains a "File" section with the text "Choose a file you want to share". Below this is a text input field containing the path "/Users/willa/hw1_01b.py" and a "Browse" button. The second section is titled "Upload mode" and contains a "Choose One" section. This section has two radio button options: "Directly share file (P2P, need to keep running for the others download)" which is selected, and "Upload file to FileShare server to share it". Below the second option is a label "Share duration after upload" and a dropdown menu showing "3 hours". At the bottom of the window, there are two buttons: "Cancel" and "Start".

Choose upload mode

2.1 Directly share file (P2P)

2.1.1 Select “Directly share file (P2P, need to keep running for the others download)”, and click “Start” in bottom right.

The image shows a macOS-style window titled "FastFileLink". The window has a title bar with red, yellow, and green window control buttons. Below the title bar, the text "FastFileLink" is followed by the tagline "A software that make you share file easier". In the top right corner, there is a circular icon containing a wrench and a screwdriver. The main content area is divided into sections. The first section is titled "Required Arguments" and contains a "File" section with the instruction "Choose a file you want to share". Below this is a text input field containing the path "/Users/willa/hw1_01b.py" and a "Browse" button. The second section is titled "Upload mode" and contains a "Choose One" section. This section has two radio button options. The first option, "Directly share file (P2P, need to keep running for the others download)", is selected and highlighted with a green rectangular border. The second option is "Upload file to FileShare server to share it", which is unselected. Below the second option is a label "Share duration after upload" followed by a text input field containing "3 hours" and a dropdown arrow. At the bottom right of the window, there are two buttons: "Cancel" and "Start".

Share duration after upload
3 hours ▼

Cancel Start

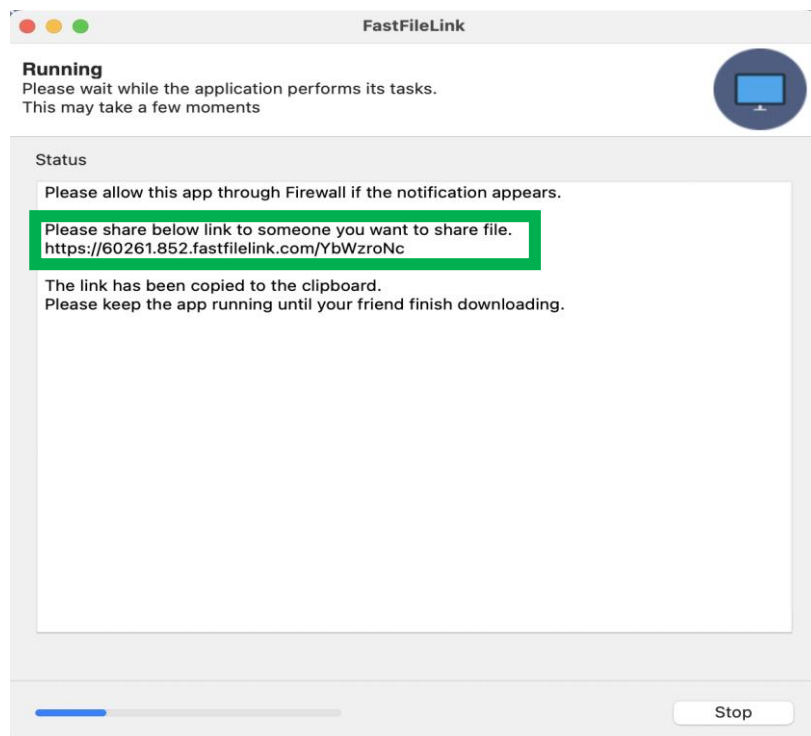

Select “Directly share file (P2P, need to keep running for the others download)”, and click “Start” in bottom right

2.1.2 Wait until share link shown

Wait until above text shown

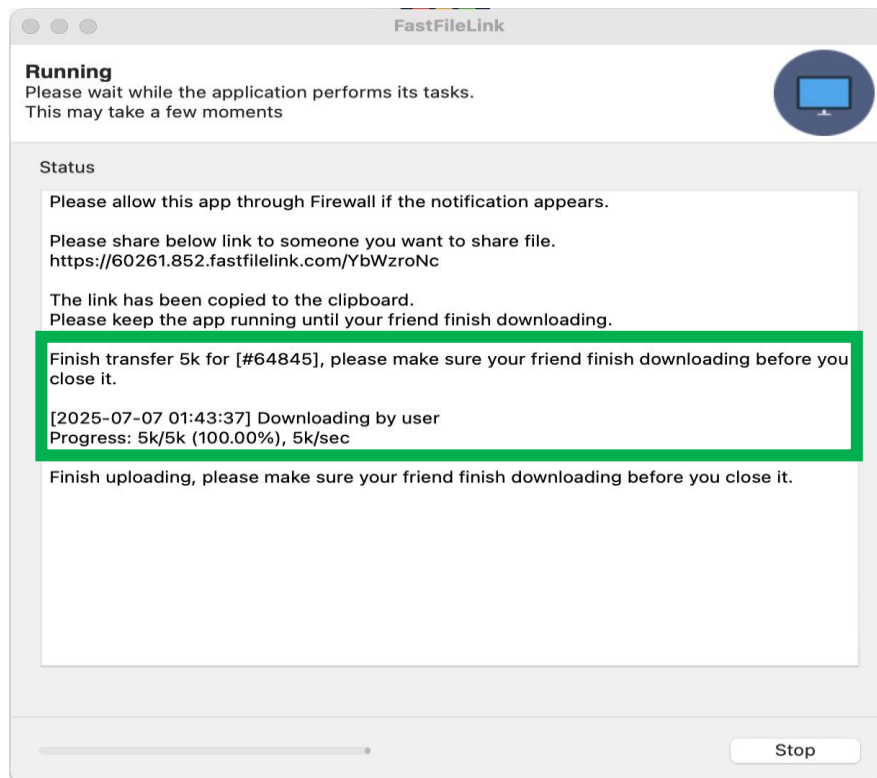

2.1.3 Copy share link to the others

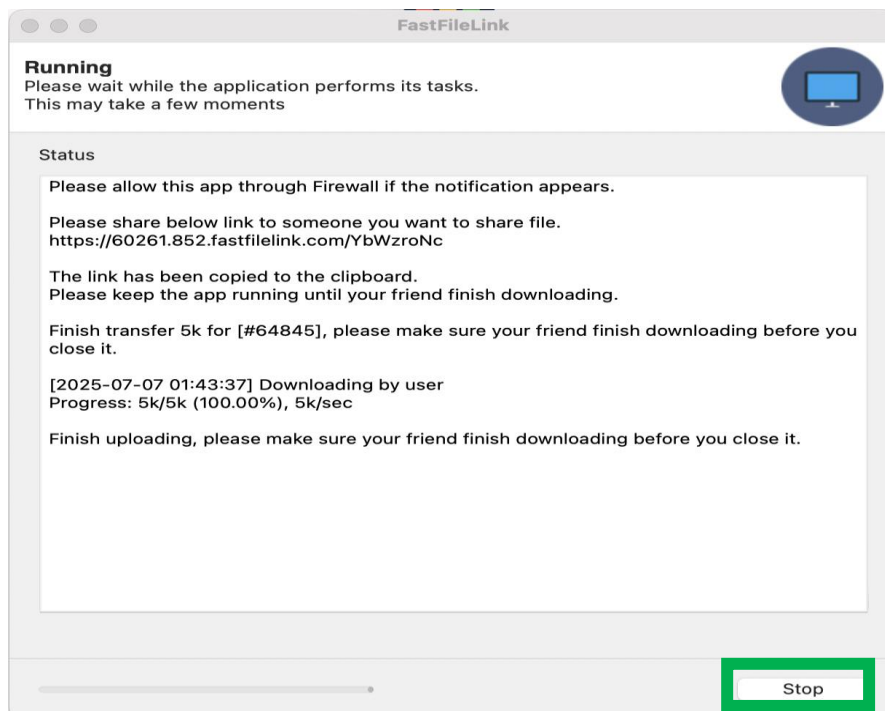

Copy share link to share file to the others

(To make sharing easier, the app auto-copies the link to your clipboard. If clipboard copy doesn't work, see the [FAQ Q9](#) for how to install the required tool.)

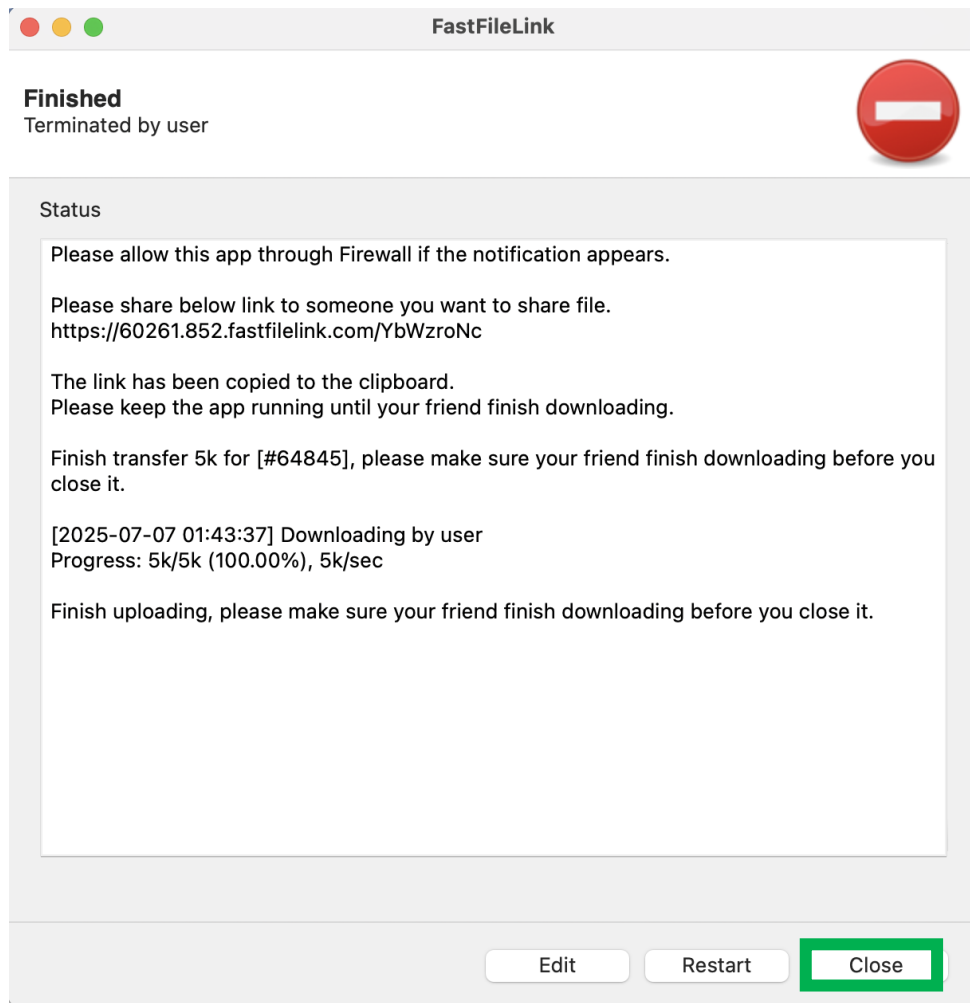

2.1.4 Wait until the others download success, and click “Stop” in bottom right to terminate sharing

When any user starts to download the file, the progress will be displayed in the app

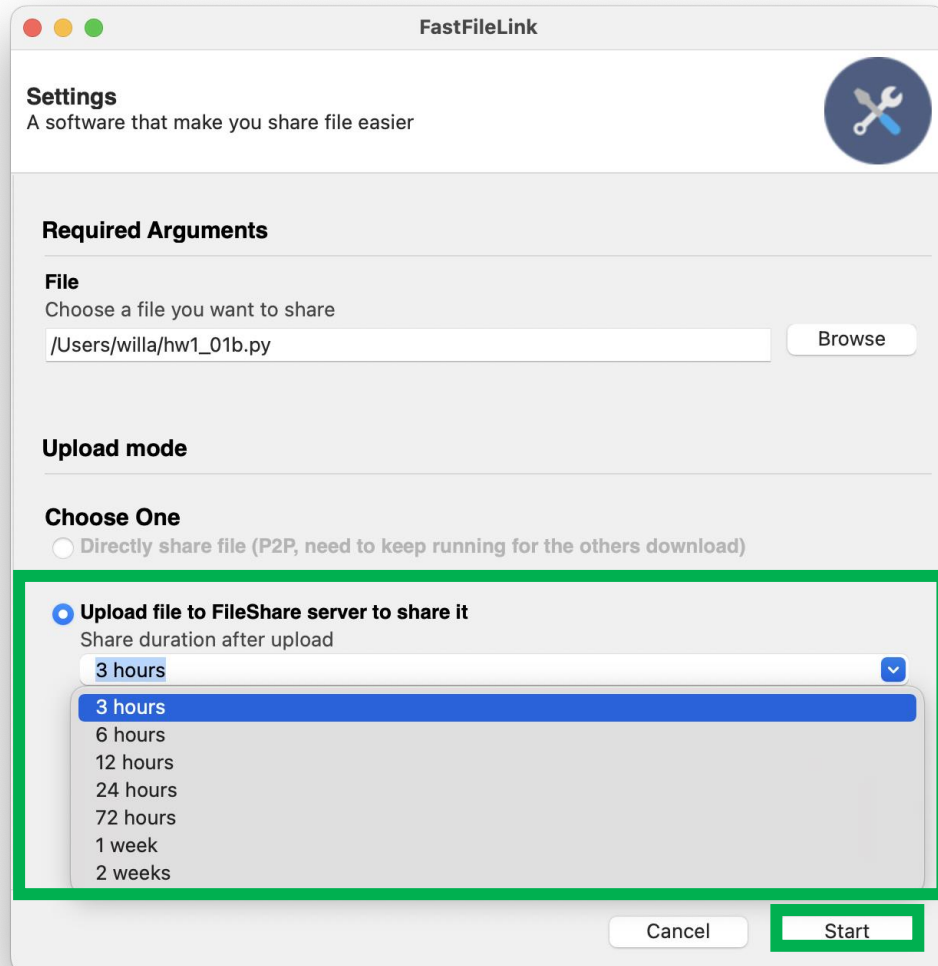

Click “Stop” in bottom right to terminate sharing after the others download successfully

Click "Close" in bottom right to close application

2.2 Upload to server

2.2.1 Select “Upload file to FastFileLink server to share it” and choose one of file retention duration

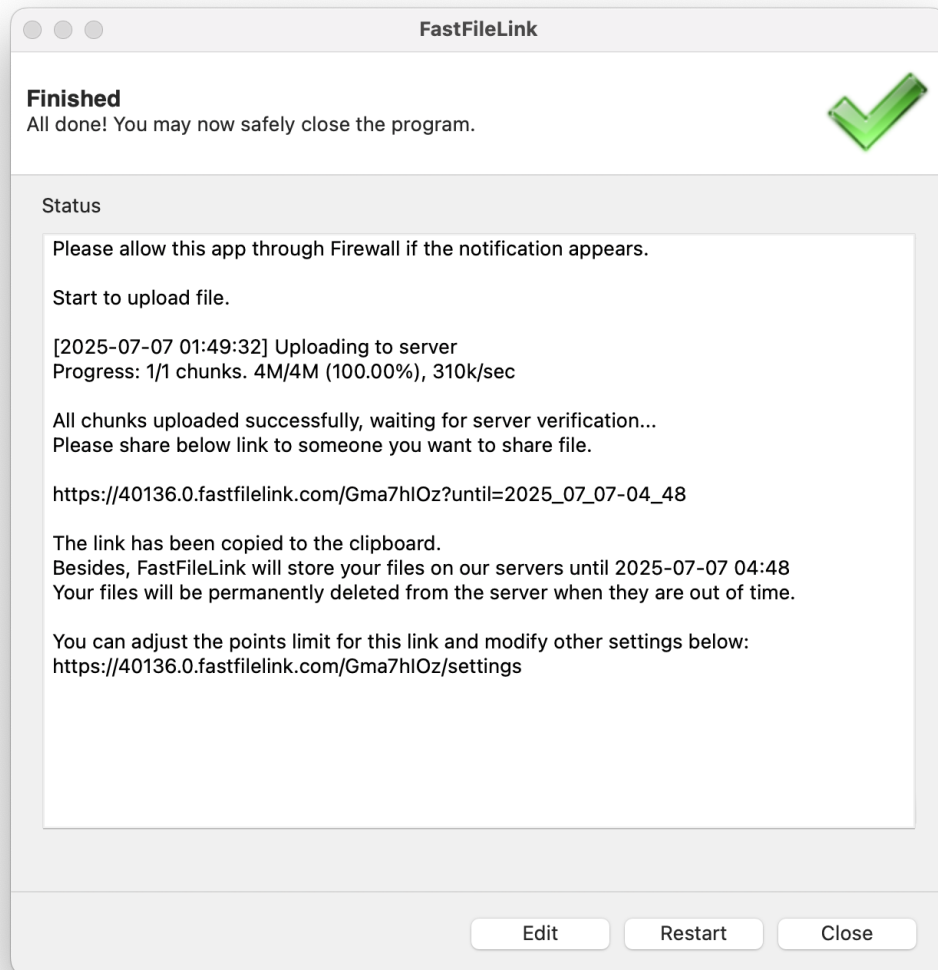

Choose one of file retention duration and Click “Start” in bottom right to start upload.

If your user points are not enough, the server will reject your upload request.

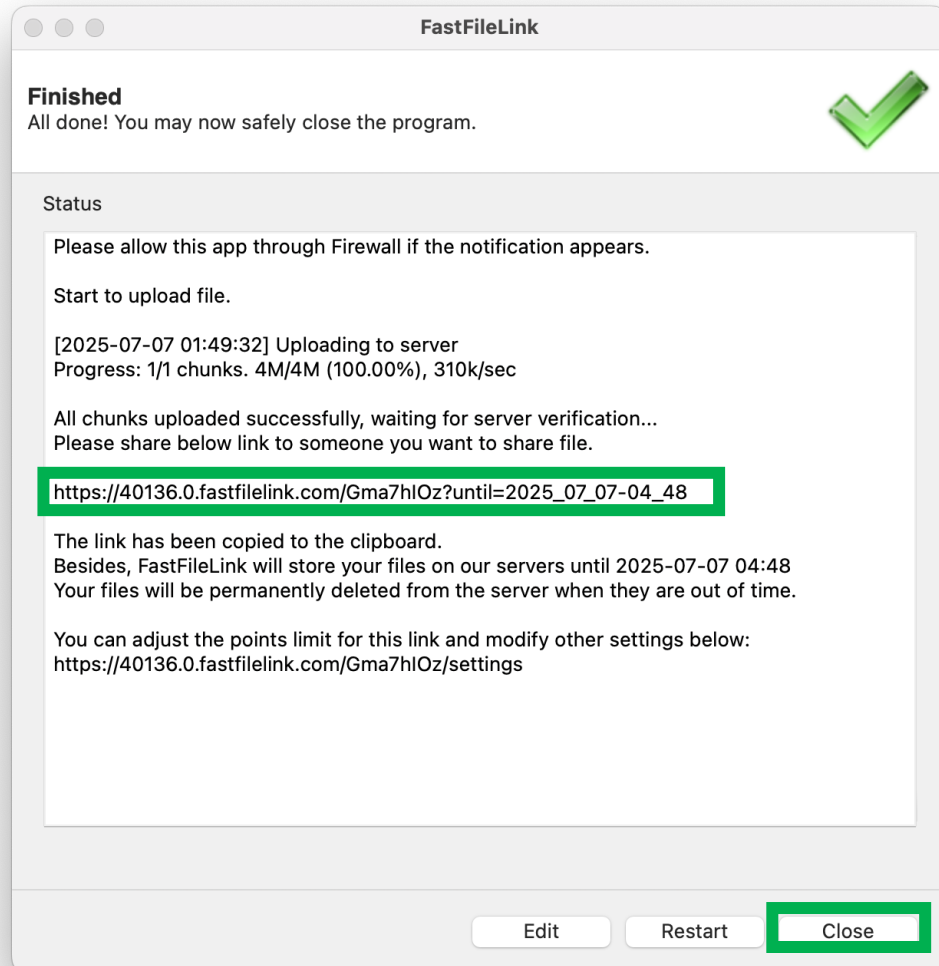

[\(FAQ Q3\)](#)

2.2.2 Wait until upload successfully

Upload successfully

2.2.3 Copy share link to the others

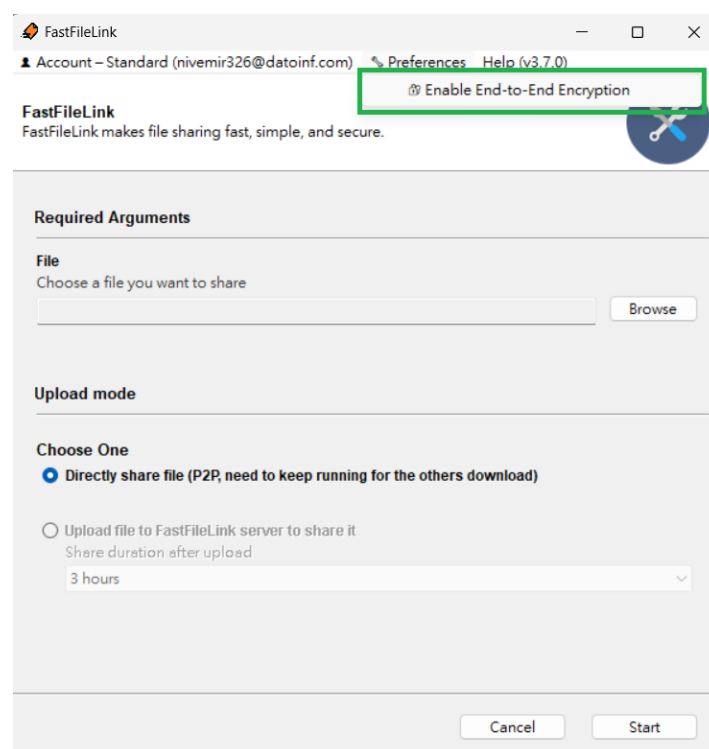

Click “OK” and copy share link to the others to share file. After that you can click “Close” in bottom right to close application.

Advanced Functions

End-to-End Encryption

We provide an End-to-End Encryption (E2EE) feature. To enable it, go to “Preferences → Enable End-to-End Encryption”.

For more information about how it works, please refer to our [Technical FAQ](#) article.

How to enable E2EE Encryption

Extension for the GUI version

To enable extra functionalities (i.e., advanced options available in the CLI version), you can place a file named `ffl_arguments.txt` in one of the following locations:

1. The same directory as the software
2. Your home directory under `.fastfilelink/`
(`C:\Users\<YourUsername>\.fastfilelink\` in Windows, or `$HOME/.fastfilelink` in Linux/macOS)

When this file is present, the advanced CLI options will also be applied while using the GUI version. For instance, you can enable features such as password protection. For a complete list of available options, please refer to our [GitHub documentation](#).

```
# Advanced FastFileLink arguments for GUI mode
# This file allows GUI users to access CLI-only features

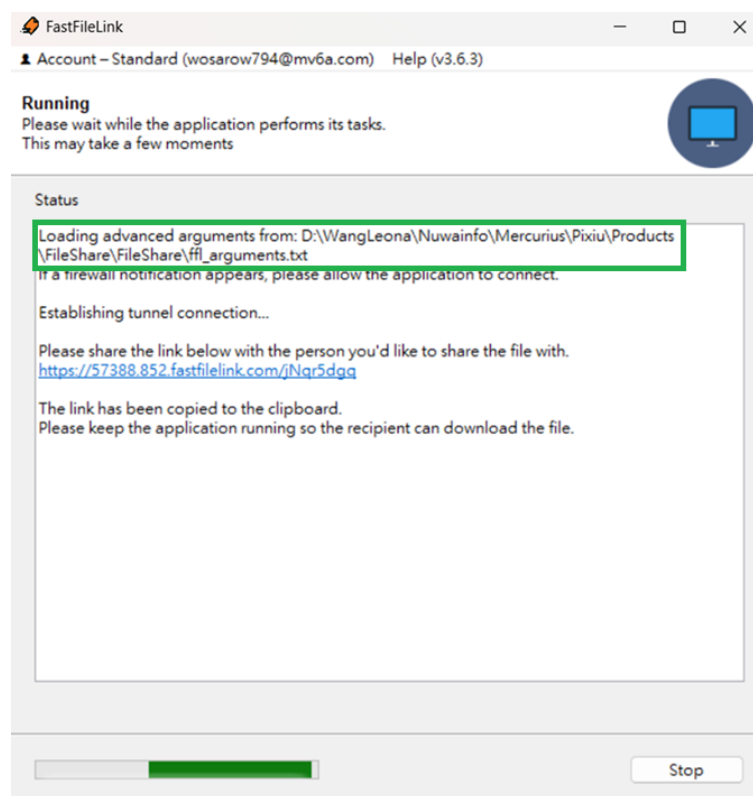

# Upload settings
--max-downloads 5
--timeout 3600

# Authentication settings
#--auth-user myuser
#--auth-password mypassword

# Output options
#--json output.json

--preferred-tunnel cloudflare
```

Example of ffl_arguments.txt

Run after configuration

CLI Version

In addition to the GUI version, we also offer a CLI version for your use. If needed, you can download it from our [GitHub repository](#).
